

THE COMPLETE LAB SOLUTION

Captiva Lab is a full-service reference lab that provides resources for medical professionals serving a wide range of patient communities. Our specialty-focus is substance abuse toxicology and related disease panels. We help assist doctors, nurses, and counselors to properly screen patients and participants to ensure the highest possible standards of care. Through our training, state-of-the-art lab equipment, and corporate ideals, we are able to remain committed to both scientific and ethical standards.

OUR SERVICES

Our services continue to expand as we anticipate our clients needs. We currently provide:

Sample Testing: using Liquid Chromatography tandem-mass spectrometry techniques, we process blood, urine & oral swab samples.

Pharmacogenomics: Identify the correct medication and dosage for your patients. Avoid ADRs and improve outcomes.

Drug Detection: Our LC-MS/MS testing provides accurate results for pain management and addiction treatment.

Specialized in Substance Abuse: Our lab and methodology has been designed with the specialty needs of addiction treatment in mind.

Customized Testing: Extensive testing options including viral and bacterial panels with results available through a quick and secure online portal.

ABOUT CAPTIVA

Leadership

Captiva Lab was founded to deliver the most advanced and comprehensive testing services to a wide range of practitioners seeking quick and accurate results. Our laboratory specializes in providing a wide range of test panels for comprehensive or specialized testing of medications, controlled substances and illicit drugs.

These panels are designed to meet the changing needs of practitioners treating patients for pain management, substance abuse, detoxification and therapeutic medication monitoring. Captiva Lab offers continuous advances in substance toxicology detection and management so that clinicians can be assured the patient is properly screened for a wide range of drugs and conditions. Our laboratory experts and field support representatives can offer the latest information and best practices in drug detection and patient monitoring. At Captiva Lab, we deliver the complete solution to clinical diagnostics from our state-of-the-art lab and our ongoing research and development. We are committed to assisting our clients in order to improve patient care with advanced testing outcomes.

History

Captiva lab was founded in early 2014 by team of clinical scientists and lab experts with a core interest in Clinical drug toxicology and opioid addiction. The founders realized clinical drug test screening and quantitative confirmation is one of the most highly effective tools in clinical care and patient treatment.

From the onset, Captiva Lab professionals have rendered care and expertise within the growing drug opioid crisis by not only contributing to improved patient care but also by advancing the test protocols, education and technologies within the clinical laboratory industry as a leader and innovator.

Captiva lab has partnered with vendors to co-develop new testing protocols that improve laboratory efficiencies and provide more accurate test results. As a leader in substance abuse toxicology, Captiva Lab is committed to maintain the highest standards and methodologies in clinical lab testing. Captiva Lab contributes proactively to the industry and peer groups as well as providing advanced toxicology solutions for patient care.

“
It was easy to switch, I was extremely pleased with their depth and clarity on resulting patient testing. I look forward to a long working relationship and making my patient care more effective and organized.
”

Steve Ericsson, Head Clinical Services,
New Light Medical Group

Oral Swabs: Simplify Your Testing

Captiva Laboratory has launched its oral fluid drug testing method using a fully automated integration with Mass Spectrometry (MS) to include a comprehensive oral fluid test panel. This unique Liquid Chromatography Tandem Mass Spectrometry (LC-MS/MS) approach for analysis of oral fluid uses a dilute-shoot method. Extraction, analytical sensitivity, and high throughput capability have been explored, showing a generic approach to quantitative drug analysis from an oral fluid matrix. Despite its limitations, by utilizing high sensitivity, high throughput quantitation using next generation MS-based testing, oral fluid testing could become the most prevalent matrix for drug testing.

With this pioneer launch, Captiva Laboratory has expanded its oral fluid drug testing to more than sixty compounds. These include drugs of abuse, synthetic cannabinoids, and drugs prescribed in pain management and addiction treatment. Captiva Laboratory can now report quantitative results with cutoffs as low as 0.125 ng/ml. The comprehensive oral fluid test panel will ensure highly accurate detection using next generation MS. Moreover, these enhancements will restore positivity rates and enable clients to place greater confidence in drug detection while benefiting from the convenience of oral fluid testing.

Clients will incur no additional charges for these enhancements and can request a standalone test or a combined panel that covers a variety of prescribed/unprescribed drugs.

Lab Technology

Captiva Lab uses state of the art UPLC/MS/MS technology designed to precisely detect and quantify drugs present in a sample, so our clients can:

- Personalize patient care and support medication therapy decisions
- Effectively monitor prescription adherence and advocate for treatment
- Remain vigilant against prescription diversion and possible illicit drug use

Customized Testing

Our exclusive methodology quickly and accurately identifies drugs and their metabolites while helping reduce cost to the patient. This includes:

- A dynamic range of specialized multi-drug monitoring panels and individual analytes - to enhance clinician choice
- Exclusive Captiva Lab Evaluation Screen - a wide variety, algorithmic approach to screen and confirmation analysis to reduce unnecessary testing and patient cost.
- Clinically relevant testing cutoff levels - balanced to minimize false positive or false negative reporting

Exclusive Services

Unsurpassed customer service and custom solutions are just a part of what we provide to each of our clients, including:

- Convenient online portal for test ordering and results management
- Expert clinical toxicology interpretation and clinical testing education available at hours convenient to our client's practice
- Professional expertise and consultation services for physician-owned high complexity laboratory (POLs)
- Exclusive CLIA-waived devices and FDA approved testing supplies
